FULL-STACK PRODUCT ENGINEER · CONSUMER WEB AT SCALE · EXPERIMENTATION & CI/CD

Full-stack engineer with 4 years at American Express shipping high-traffic consumer features across the MYCA platform — the authenticated web surface serving millions of cardholders. Ships end-to-end across frontend (React/TypeScript), backend (Kotlin BFF, GraphQL), and CI/CD, with measurable product impact: +18% profile completion and ~650K annual support calls eliminated. High-agency builder who leans on modern AI dev tooling to ship faster.

PROFESSIONAL EXPERIENCE

American Express — Software Engineer

08/2022 – Present

- Engineered supplementary profile flows (React.js, BFF/WPS) enabling users to select and persist a chosen card across all update journeys — drove **+18% completion rate** and **+16% start rate**, eliminating **~650K annual support calls** and enabling **~5M profile updates/year**
- On the MYCA Overview Team (authenticated landing page for all cardholders), led end-to-end Ghost Accounts implementation — analytics, personalization, and rendering logic; built the deep-link offers flow, routing cardholders from an offer to eligible-card selection through enrollment
- Delivered the first production BFF for identity profile updates (Kotlin/WPS), establishing reusable routing, eligibility, and "apply all" patterns adopted across card and banking products; co-designed the Qualifiers API enabling C360 mutations for **100%** of MYCA users
- Led A/B experimentation across MYCA — technical lead for **6 experiment configurations** (OneXP, analytics tagging, feature flagging), driving successive iterations from UX and product learnings
- Standardized CI/CD across **15+ shared library modules** with GitHub Actions and automated releases; introduced reusable workflows and updated the org-wide codemod, improving deployment reliability across teams
- Led the Selenium → Playwright migration and monorepo onboarding with reusable playbooks; drove adoption of AI-assisted engineering workflows to speed up delivery
- Spearheaded a WCAG AA accessibility audit across Account Services profile flows, raising audit scores to **100%** (axe DevTools, screen-reader testing) and catching heading-hierarchy violations pre-release; later extended the same flows to 8–10 international markets. Mentored 5+ engineers and led a quarterly cohort of 8 new graduates

CodePath — Teaching Assistant, Intro to Software Engineering

05/2022 – 08/2022

- Led weekly instruction for 180+ students in Python-based Data Structures & Algorithms (85% satisfaction); mentored on technical concepts, debugging, and interview readiness

NYC Department of Transportation — GIS Intern

04/2022 – 08/2022

- Built Python automation to process annual census data and integrate with ArcGIS Pro — cut manual processing from weeks to seconds, enabling district-level demographic maps for policy decisions

PROJECTS

- Hermes** — self-hosted multi-agent AI system. Built and operate a 3-node local-inference platform running scheduled AI workflows: multi-model routing, retrieval/memory, execution tracing with an eval loop, and human-in-the-loop approval gates — end-to-end ownership from infrastructure to product.
- elchic00** — Deployed an AI chatbot on a public site that retrieves relevant project context via keyword matching and generates responses with Gemini.

VOLUNTEER LEADERSHIP

- CodePath (06/2021 – Present): Mentored 350+ students across DS&A, cybersecurity, and career readiness; currently leading a weekly open-source contribution course (GitHub workflows, PRs, early-career prep)
- Hunter College Alumni Mentorship (2025 – Present): 1-on-1 mentorship on side projects, resume optimization, and technical interviews

EDUCATION

Hunter College (CUNY) — B.A., Computer Science

May 2022 · GPA 3.62, Cum Laude

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, SQL, Kotlin
Frontend	React.js, Next.js, Redux / Context API, HTML5, CSS3, Tailwind, responsive design, SPAs
Backend & APIs	Node.js, GraphQL, REST, BFF architecture (WPS/Kotlin), microservices
Cloud & Tooling	AWS, Docker, GitHub Actions (CI/CD), Jest / React Testing Library, Playwright, AI-assisted development
Practices	A/B testing & experimentation (OneXP), WCAG AA accessibility, performance optimization, Agile/Scrum
