FULL-STACK PRODUCT ENGINEER · CONSUMER WEB AT SCALE · AI-ASSISTED DELIVERY

Full-stack engineer with 4 years at American Express building the logged-in account experience on americanexpress.com, used by millions of cardholders, with design, product, and analytics partners. Leads AI-assisted development on the team; builds and runs self-hosted AI systems (agents, evals, local inference).

PROFESSIONAL EXPERIENCE

American Express — *Software Engineer*

08/2022 – Present

Account Overview (cardholder landing page) · 2026–present

- Shipped personalized Overview features — targeted product recommendations beside existing accounts, grouped Personal/Business accounts, and routing to offers on eligible cards — plus the impression/click analytics
- Owned drag-and-drop account reordering from proof of concept to implementation: accessible POC, feasibility report, the five-PR plan the team executed, state model, and keyboard-accessible interaction
- Drove AI-assisted delivery: **127 of 176** PRs I merged (Mar–Sep 2026) were co-authored with Devin/Copilot under my scoping/review; made AI review the team's first pass, led enablement for two teams, and published 2 shared agent skills
- Migrated 10 test suites from Selenium to Playwright and wrote the playbook later suites followed, reducing a module migration from ~5 days to ~2; modernized CI across 16 team repos

Profile / Account Services · 2022–2025

- Engineered supplementary-card profile flows (React, routing/state management) and defined success metrics with analytics partners, driving **+18% completion** and **+16% start rate** and reducing support calls by **~650K/year**
- Delivered the team's first production BFF (identity profile updates) and its reusable routing/eligibility patterns; co-designed an eligibility API for card and banking; integrated the new customer-data platform (**~5M updates/year**)
- Ran experimentation for profile journeys: **6** experiment configurations to ramp the customer-data migration, customer-level profile A/B tests, and a documented same-route, two-module experiment setup for other teams
- Standardized CI/CD across **15+** modules with GitHub Actions and contributed automated releases to the org-wide workflow codemod; led a WCAG AA audit of profile flows to a 100% audit score (axe, screen readers)
- Mentored 5+ engineers, onboarded 6, led an 8-person new-grad cohort, and hosted a biweekly team technical forum

NYC Department of Transportation — *GIS Intern*

04/2022 – 08/2022

- Built Python automation for annual census data in ArcGIS Pro, cutting manual processing from weeks to seconds

PROJECTS

- Hermes — self-hosted AI agent platform.** Runs Nous Research's open-source hermes-agent on local models across 3 nodes; built the eval loop (nightly Langfuse LLM-judge scoring, a LangGraph job that proposes prompt fixes behind human approval) and a from-source llama.cpp/ROCM inference layer (GPU allocator fix, 5x prefill speedup)
- jobfit — LangGraph job-fit scorer.** Deterministic role, location, and pay filters, then grounded, batched, schema-validated LLM scoring (a measured rewrite cut tokens 71%); FastAPI + CLI, Langfuse tracing, CI
- elchic00.github.io** — portfolio site with a Gemini chat assistant on Cloudflare Workers; 100/100 Lighthouse a11y

LEADERSHIP

- CodePath** (2021–present): TA for 180+ students in Python DS&A (2022, 85% satisfaction); mentored 350+ students in DS&A, cybersecurity, and careers; leads a weekly open-source contribution course. **Hunter College** alumni mentor

EDUCATION

Hunter College (CUNY) — B.A., Computer Science, Cum Laude · GPA 3.62

May 2022

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, Kotlin, SQL
Frontend	React, Next.js, Redux, Tailwind, HTML/CSS, WCAG AA accessibility
Backend	Node.js, GraphQL, REST, FastAPI, BFF architecture
AI / LLM	LangGraph, Langfuse, LiteLLM, llama.cpp, LLM evals, Claude Code, Copilot, Devin
Delivery	GitHub Actions, Docker, AWS, Playwright, Jest/RTL, A/B testing, feature flags
